With the i-switch range comes an important safety feature which prevents the enclosure cover being removed when the device has been padlocked in the 'Off' position. When combined with the excellent on-load breaking capacity of the i-switch family this feature ensures that the term 'Safety Switch' is fully satisfied.

GRABWIRE SWITCHES

The GW range is designed for indoor or outdoor applications with a span between switches of 100M (max.). All items operate using a 'taut wire' system which is pulled to initiate a 'STOP' function.

The grab wire switches are sold individually and the only other component required to complete an installation is a 'Pull Wire' Kit.

These are sold in various lengths and contain the pull wire all parts required to make-off the wire at both ends and sufficient eyebolts to support the wire at 2M intervals.

Contact your local sales office for details.
